IN-CHANNEL SCREW SCREENS RSP

Screw Screens for Mechanical solids/liquids separation

MACHINE DESCRIPTION

R.E.M. range of screw screens for solids/liquid separation is a broad and wide selection where units for every application can be found. RSP Screw screens are multipurpose units capable to screen, convey, compact and dewater the screenings.

WORKING LOGIC FOR SCREW SCREENS RSP

REM RSP screw screens are generally installed in municipal applications as they allow to have a single unit performing the whole process. RSP screens include the compaction section. Screw screens are made of the following sections:

- Screen
- Transport section
- Discharge with compactor
- Drive
- Support

Screw screens are succesfully installed for the following applications:

- Municipal sewage
- Industrial effluent treatment
- Industrial process applications (i.e. vegetable screenings, entrails screenings, etc.).

MAIN FEATURES FOR SCREW SCREENS RSP

. Screen frame available with perforated or wedge wire screen aperture in various sizes. The machine is self-cleaning, thanks to the brushes fitted on the screw conveyor. The shaftless screw conveyor allows lifting of materials of different shapes and sizes, which are, however, difficult to transport.

- tion requirements. The stainless steel structure along with brushes made of plastic material enable the use of the machine for handling acids, basic products and foodstuffs. Entire operation of the machine is handled by the drive units.

Installation is easy and fast.

GENERAL DIMENSION DATA FOR SCREW SCREENS RSP Here we provide some information of a technical nature for this type of screens:

- Filtration with screens of sizes ranges from 250 microns (wedge wire) to 12 mm (perfo-

- rated).
- Models suitable for channels from 300 to 900 mm wide.
- Removal and conveying of screenings to the discharge point with a single drive.
- Volume reduction of screenings up to 50%.
- Effective drainage of the screenings along the conveying section combined with a compaction section for more volume reduction and water removal.
- Washing of screenings performed by the REMSPRAY integrated system using 3 independent washing cycles.

The main advantages are:

- reduced installation costs.
- high capture and removal of solids (52% tested).
- high volume reduction of screenings.
- nuisance and leachate reduction.
- reduced handling and disposal costs.

R.E.M. RSP screw screens can be equipped with the following accessories:

- vertical discharge.
- bagging (single or endless bag type).
- heat and weather protection.
- centralized solenoid valves and piping.
- control cabinet.
- ATEX or UL NEMA 7 EX-proof version.

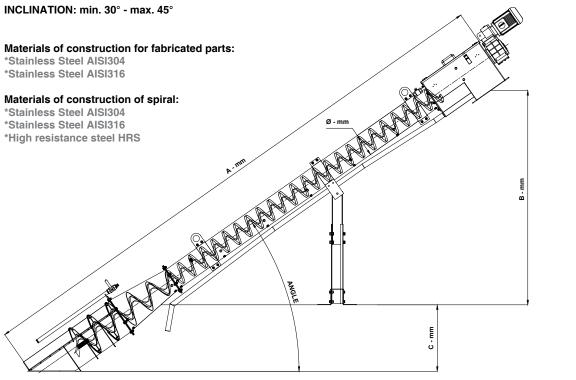

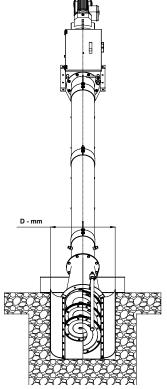

STANDARD DIMENSION DATA FOR SCREW SCREENS RSP

Here we provide some information of a technical nature for this type of screens.
